Only subsequent events in a queue are delayed; for example this will not delay the no-arguments forms of `.show()` or `.hide()` which do not use the effects queue. `.delay()` | jQuery API

Documentation Note that `.height()` will always return the content height, regardless of the value of the CSS box-sizing property. As of jQuery 1.8, this may require retrieving the CSS height plus box-sizing property and

then subtracting any potential border and padding on each element when the element has box-sizing: border-box. To avoid this penalty, use `.css( "height" )` rather than `.height()`. `.height()` | jQuery API
