Curl control on a fourdrinier machine involves adjusting the stock velocity relative to that of the wire in increments of 10-20 fpm.

We wish to minimize differences in wire versus fiber orientation between wire and felt sides. A measurement that can be used to make comparisons is the hot bend curl test (see figure 3) Figure 3. Hot bend curl test CURL BASICS (revised) Paper curl is caused by an excess amount of moisture in the paper. The first step to ensure less paper curl is to store your paper in a cool, dry area. How to Fix the Paper Curl Problem In a method frequently used to determine the tendency 'of paper to curl, !l measurement is made of the amount of curl of a small piece of the paper floating on water. The measurement is customarily made in terms of an arbitrarily chosen angle. The maximum curvature, however, is a more logical measure of curliness. Measuring the degree of curl of paper - NIST Paper tends to curl most in the direction of the side or surface from which moisture migrates last. Curl problems during use can be expected if the moisture content of the paper does not correspond to the equilibrium humidity condition that will be present when the paper is converted or printed.
